HACKATHON' 2022

Problem statement title:Common platform to track placement

Organization: All india council for technical education

Category: Software(Website)

Problem statement no:DR719

Domain Bucket: Smart Education

Team Name:Algomers

Team leader name:Abhishek Singh

Background: As on today, in our country we are not having any master data base regarding campus placement in technical institute and Universities throughout the country. By mapping the entire placement details throughout the county, the percentage of un-employability can be identified in various fields of education. This will help the policy makers to come out with appropriate solution through framing of policies for tackling the unemployability in the country. Provision of common platform in which the entire data base of campus placement of all technical institutes/ Universities throughout the country by interlinking it will be extremely useful for the following:

 1. Government/Policy makers to come out with appropriate solutions.
 2. Corporates to have access to the students through a central database

Summary: An integrated platform should be developed where in all the universities/Colleges can share the resources for campus placement and the corporates can also access this database for recruiting students for the available vacancies. **Objective: :** To develop an inter-linked platform for Campus Placement in Higher educational Institutions of India"
